RECOMMENDED SOLDERING PATTERN

◆ Approximate expression for Circuit load capacitance

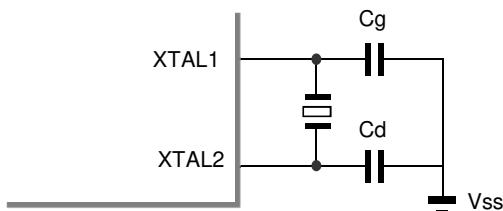

$$CL = Cg \times Cd / (Cg + Cd) + Cs \text{ (pF)}$$

Cos : XTAL 1-XTAL 2 Stray capacitance

Cgs : XTAL 1-Vss Stray capacitance

Cds : XTAL 2-Vss Stray capacitance

◆ Qualification item for Oscillation circuit characteristics

No	Items	Symbol	Recommendation
1	Negative Resistance	RL	
2	Oscillation allowance	M	more than 5 times of R1Max.

◆ Notes for the design of Circuit board

Please keep the wiring short and place Quartz Crystal, Condensor, and Resistance close as possible to Microchip microcontroller. In order to prevent interference with other signal lines, do not provide other signal lines, please do not provide other signal lines on the crystal mounting part (bottom surface).

We value the "takumi" spirit.

◆Notes

The above evaluation results are reference values evaluated in the specific sample, and the contents are not guaranteed.

Please note that in the actual circuit board, the value of the external element capacitance and the characteristics may change depending on the difference in stray capacitance and so on.

The microcontrollers from Microchip Technology Inc. that are tested each represents a set of microcontrollers with the same crystal driver circuits. Please refer to application note
